AURORA INTAKE AGENTS

Part of aurora agent suite

Applications and invoices come in by email, phone, or portal, and aurora builds the deal right inside your LOS. Files go straight to credit in minutes without anyone touching them.

The screenshot displays the aurora ai web interface. On the left, a 'Verify Application Data' panel shows extracted information for 'Minoqua Manufacturing' with status indicators: 'Verified' for Company Name, Entity Type, and Industry; 'Needs Review' for Tax ID (EIN) and Annual Revenue. Below this, 'Business Details' and 'Address & Ownership' sections also show verification status. On the right, a form titled 'ACME Equipment Finance Application' is shown, with fields for Applicant Information, Business Information, Business Address, and Ownership Information, all populated with data from the verification panel.

features that will make your team happy

dealer's choice

Brokers and vendors can email it, take a photo or upload it to the portal, and aurora starts building the application the moment it arrives.

knows an invoice when it sees one

Aurora figures out which attachment is the application and which is the invoice, even when the vendor names everything scan_001.

all green flags

Every field gets a confidence score, and anything at 96% or above earns its green flag and verifies itself. You can adjust the threshold, or turn it off entirely if trust issues run deep.

look ma, no hands

The vendor hits send, and by the time anyone on your team looks, there's a finished application waiting in your LOS, touchless from start to finish.

need-to-know basis

The priority review queue hands your team the short list of fields worth a second look and keeps the rest out of the way.

no new hires required

A complete, verified application lands in your LOS, so credit can start in minutes and your team can fund more deals without adding headcount.

See how many deals could go touchless.
